

Subject Index

5HT receptors, 18–19

8-OH-DPAT, 18–19

A

A-fibers, 105, 126

Acetylcholine, 20

Agouti-related protein (AgRP), 85, 88, 89

Alpha-2 adrenergic receptors, 21

α -gustducin, 106, 140

Amiloride, 105–106, 121, 122, 123
effectiveness of, 137, 138, 139

Androgen receptors, 43, 48, 55, 57

Androgens, role in food hoarding, 80

Anesthesia, 142–144, 145

palatal, 144

of tongue, 144

Appetitive behaviors, 69, *see also*

Ingestive behavior, appetitive phase

Aromatase activity, 48

B

Behavior, definition of, 101

Benzodiazepines, 5–6, 16

Bmal gene, 9

Body fat levels

changes in pregnancy, 81

inverse relation to food hoarding, 80–86

Brief-access taste tests, 110, 111, 117, 118, 119, 130

after GL and CT transection, 139

C

C-fos gene, 13

Carbachol, 15–16, 20

Chorda tympani (CT) nerve, 103

effects of combined CT and GSP transection, 130–131

stimulus discrimination, 131

unconditioned licking responses, 130–131

effects of CT transection, 115–125, 133–135, 137–138

conditioned taste aversion, 122–124

oral motor taste reactivity, 118–119

signal detection, 115–117, 137

sodium appetite, 121–122

stimulus discrimination, 119–120, 126, 137, 138

on taste buds, 133–135

unconditioned licking responses, 117–118

innervation of salivary glands by, 113, 124
regeneration of, 134–139

CT and GL cross-regeneration, 140–142

CT and GSP cross-regeneration, 140
in humans, 134–135

Circadian oscillators, 22–23

Circadian pacemaker

activity-dependent feedback effects, 6–7

dark pulse effects, 7–8

neurobiology of, 8–12

nonphotic effects, 5–7, 13, 14

novelty-induced effects, 5, 16, 17, 19–20

phase shifting, 14

carbachol-induced, 20–21

clonidine-induced, 21

histamine-induced, 21–22

serotonergic, 18

triazolam-induced, 19

photic effects, 3–5, 13, 14
 photic entrainment, 12–13, 15, 16
 sleep-deprivation effects, 5
 Circadian system, *see also* Circadian
 oscillators; Circadian pacemaker
 free-running, 2, 15
 behavioral studies of, 3
 period affected by continuous
 illumination, 4–5
 Circumvallate papillae, 103, 106, 107,
 133, 136
CKIε gene, 9, 10
Clock genes, 9
 Clock-controlled genes (CCGs), 9
 Clonidine, 21
 Cold exposure, 72–73, 85
 Consummatory behaviors, 69, *see also*
 Ingestive behavior, consummatory
 phase
 Corticotropin-releasing hormone
 (CRH), 85
Cry genes, 9, 10

D

DARPP-32, 51
 Dendrites, 54
 Dietary wisdom, 75
 Disinhibition, 143–144
 Dopamine receptors, 51
Drosophila clock genes, 9

E

ENaCs, *see* Epithelial sodium channels
 Energy acquisition, 70
 Energy balance, 86, 92
 Energy flux, 86, 92
 Energy stores, 75, 81, 85
 Enkephalin, 41, 42, 43
 Epiglottis, 106
 Epinephrine, 78, 79
 Epithelial sodium channels (ENaCs),
 105–106, 112, 121, 123, 138
ERα, 48, 50–51, 56
ERβ, 48, 50–51, 56
 Estradiol, 53, 80
 Estrogen
 cellular effects of, 50–51
 neonatal exposure to, 49
 neuronal activity effects of, 51–52

 receptors
 expressed by VMH afferents, 52
 expressed by VMH neurons, 43, 44,
 45–46, 52
 spine density regulator, 48
 Estrus cycle, effects on food hoarding, 80

F

Fasting, 73–74, 88
 in photoperiod, 72
 Fish, 145
 Flank stimulation, 46
 Flavor, 101
FLI, *see* Fos-like immunoreactivity
 Foliate papillae, 103, 106
 Food-carrying behavior, 70–71
 Food hoarding, 69–92
 central control of, 86–91
 deficit hypothesis, 71, 74
 early laboratory studies, 70–71
 environmental influences, 71–78
 cold exposure, 72–73, 85
 food shortage, 73–74
 food type, 74–75
 foraging effort, 75–78
 photoperiod, 72
 inverse relation to adiposity, 80–86
 lipostatic theory, 71
 in nature, 70–71
 peripheral physiological controls of,
 78–80
 gonadal steroids, 79–80
 metabolic fuel challenges, 78–79
 Food intake, role of VMH in, 56
 Food restriction, 73
 Foraging, 69, 87–90
 effort, 75–78
 Fos induction, 46
 Fos-like immunoreactivity (FLI),
 127–129
 Frustration, 71
 Fungiform papillae, 102, 107, 134

G

G-protein genes, 107
 GABA, 10, 11, 15, 16, 17
 in VMH, 46, 47, 48, 49, 52
 GAD, 47
 GAP-43, 49
 Gaping, 127–129, 132, 136

- Geniculohypothalamic tract (GHT), 15–17
 Geschmacksstreifen, 103, 106, 134
 GHT, *see* Geniculohypothalamic tract
 Glossopharyngeal (GL) nerve, 103
 effects of GL transection, 125–129, 131
 oral motor taste reactivity, 127–129
 sodium appetite, 126
 stimulus discrimination, 120, 125–126, 131
 on taste buds, 133, 134
 unconditioned licking responses, 125
 human, 144
 innervation of von Ebner's glands by, 113
 regeneration of, 134–136, 139
 GL and CT cross-regeneration, 140–142
- Glucoprivation, 79
 Glutamate, 13, 16, 17, 21, 22
 in VMH, 46, 47, 52
 Goal-lessness, 71
 Golgi impregnation, 53
 Gonadal fat, 78
 Gonadal steroids, 79–80
 Greater superficial petrosal (GSP)
 nerve, 103, 114
 effects of combined CT and GSP transection, 130–131
 stimulus discrimination, 131
 unconditioned licking responses, 130–131
 regeneration of, 134
 GSP and CT cross-regeneration, 140
- Gustatory system, peripheral, 101–146
 anatomy, 102–103, 104
 biophysics and molecular biology, 105
 electrophysiology, 103–105
 human, 142–145
 compared with rodents, 146
 nerve cross-regeneration, 140–142
 nerve regeneration consequences, 133–139
 nerve transection consequences, 111–133
 CT and GSP transection, *see* Chorda tympani (CT) nerve, effects of combined CT and GSP transection
 CT transection, *see* Chorda tympani (CT) nerve, effects of CT transection
 early history, 113–115
 general caveats, 112–113
 GL transection, *see* Glossopharyngeal (GL) nerve, effects of GL transection
 summary and functional implications, 131–133
- H**
 H-fibers, 104, 105
 Hibernation, 72
 Histamine, 21–22
 Hunger, 71
 Hyperphagia, 74
- I**
 IGL, *see* Intergeniculate leaflet
 Immediate early-response genes (IEGs), 13, 16
 Infertility, fasting-induced, 83
 Ingestive behavior
 appetitive phase of, 69, 87, 88, 90, 111, 127, *see also* Food hoarding;
 Foraging
 consummatory phase of, 69, 87, 90–91, 111, 127
 Inosine monophosphate, 107
 Instinct, 71
 Insulin, 79, 111, 123
 Intake tests, 110, 111, 113–115, 141
 Intergeniculate leaflet (IGL), 11, 15–17, 18, 19
- K**
 Kinase C, 51
- L**
 Lateral hypothalamus (LH), 85
 Leptin, 82–83
 Licking responses, 110, 117–118, 119, 125, 130–131, 145
 Lipectomy, 81
 Lipid deficits, 81–82, 86
 sensed by brain, 82–83
 Lipoprivation, 79
 Lordosis response, 39–40
 estrogen mediated, 50–51
 in male rats, 49
 role of GABA in, 46, 47
 role of glutamate in, 47
 role of VMH in, 44, 47, 58

M

Macronutrients, 75
 Masking, 2
 Maternal aggression, 55
 Maternal behavior role, 55
 Maternal nurturing, 55
 Mecamylamine, 20
 Melanocortin (MC), 89
 Melanopsin, 13
 Melatonin, 23, 72, 86
 Metabolic fuel utilization, 79
 mGluR4 receptors, 107, 112
 Micronutrients, 75
 MK-801, 21
 Morphine, 90, 91

N

N-fibers, 104, 105
 Naltrexone, 90, 91
 Nasoincisor ducts (NID), 130, 134
 Neuropeptide Y (NPY), 11, 15, 16, 17, 88
 injected, 85, 87, 88, 89
 Neuropeptides
 as controllers of appetitive ingestive
 behaviors, 88–90
 as controllers of food intake, 87
 Neuropil, in VMH, 48
 NPY, *see* Neuropeptide Y
 Nucleus of the solitary tract (NST), 103,
 127–128, 135, 139, 143, 145

O

Opiates, 90
 Oral motor taste reactivity, 118–119,
 127–129
 Orexin, 88, 89
 Oxytocin receptors, 43, 44, 51

P

PAG, *see* Periaqueductal gray
 Paraventricular nucleus (PVN), 40–41
 Per genes, 9, 10, 14, 17
 expression effects
 of 8-OH-DPAT, 19
 of glutamate, 13
 of light exposure, 17
 of PACAP, 15
 expression in peripheral tissues, 23
 functional specialization, 22
 Perception, 101

Periaqueductal gray (PAG), 40, 41,
 42, 54
 role in lordosis reflex, 44
 subdivisions of, 42
 Peripheral gustatory system, *see* Gustatory
 system, peripheral
 Phase–response curves (PRCs), 2
 for carbachol-induced phase-
 shifting, 20
 dark pulse, 7–8
 nonphotic, 6, 14, 20
 for novelty-induced activity, 4, 5, 7
 photic, 3–4, 6, 14, 20
 for serotonergic stimulation, 18
 triazolam effects, 4, 5, 7
 Photoperiod, 72, 86
 Pineal gland, 72
 Pituitary adenylyl cyclase activating peptide
 (PACAP), 11, 15
 Posterior palatine field, 103, 134
 PRCs, *see* Phase-response curves
 Predation, 92
 Progesterone, 80
 Progesterin receptors, 44, 46, 48
 Prolactin, 42, 43, 80
 PRV detected in, 45
 Proopiomelanocortin gene, 88
 Pseudorabies virus (PRV), 44–46
 Pup cannibalism, 75
 PVN, *see* Paraventricular nucleus

Q

Q-fibers, 105, 126
 Quinine aversion, 114, 115

R

Raphe nuclei, mesencephalic, 11, 17–20
 Reproduction, and food hoarding, 80,
 86, 92
 Retinohypothalamic tract (RHT),
 12–15, 17

S

S-fibers, 105
 Salivary glands, innervation of, 113,
 124–125
 Salivation, 111, 133
 SCN, *see* Suprachiasmatic nucleus
 Security, 71
 Serotonin, 17–20

- Sexual behavior
 human, 57
 importance of VMH for, 40, 55
 rodent, 39
- SF-1 gene, 55
- SLN, *see* Superior laryngeal (SLN) nerve
- Sodium appetite, 121–122, 126
- Spines, dendritic, 53, 54, 58
- Splitting, 22
- Substance P (SP), 11, 15, 42, 43, 46, 56
 in WAT, 83
- Superior laryngeal (SLN) nerve, 103,
 114, 132
 minor role in taste-guided behavior, 130
- Suprachiasmatic nucleus (SCN)
 circadian oscillation in, 8–9
 core, 10–12
 GRP-positive neurons in, 10
 VIP-positive neurons in, 10
- SCN afferent systems, 11, 12–22
 IGL, 11, 15–17
 raphe, 11, 17–20
 retinal, 11, 12–15
 shell afferents, 20–22
 shell, 10–12
 AVP-positive neurons in, 10
- T**
- T1Rs, 107
- T2Rs, 106, 107
- Taste, 101
- Taste aversion, conditioned, 122–124
- Taste buds, 102–103, 104
 after nerve transaction, 133–134
 regeneration of, 134, 135, 136, 139
- Taste discrimination tasks, 119–120,
 122, 125–126, 131, 137–138,
 144–145
- Taste dysfunction, human, 142–145
- Taste function, 108–109
 domains of, 109–111
 affective, 109, 110–111
 physiological domain, 111
 sensory-discriminative, 109–110
- Taste phantoms, 143
- Taste pore, 102
- Taste receptor cells, 101, 102
 ion channels on, 105
 laryngeal, 102, 114
 palatal, 106, 114
 protein receptor sites on, 105
- Temperature rhythm, daily, 2
- Testosterone, 80
 neonatal exposure to, 49
- Thermal homeostasis, 72
- Thiouracil, 79
- Thyroxine, 79
- Tim* gene, 9
- Tongue maps, 108–109
- Triazolam, 5–6, 16, 17, 19–20
- Triglyceride, 111
- U**
- U-50,488H, 90, 91
- Umami*, 107
- V**
- Vaginal cervix stimulation (VCS), 39, 46
- Ventromedial nucleus of the hypothalamus
 (VMH), 39–58
 afferents, 40–41, 49, 52
 calorie regulation role, 55–56
 cellular effects of estrogen in, 50–51
 central zone, 43
 dorsomedial zone, 43
 spine density in, 53, 54
 efferents, 42
 human, 56–57
 intrinsic circuitry, 43–47
 male sexual behavior role, 55
 maternal behavior role, 55
 neuronal activity effects of estrogen in,
 51–52
 rostral zone, 43, 45
 sexual dimorphisms of, 47–50
 synaptic organization, 44, 48
 estrogen-induced changes, 52–55
 ventrolateral zone, 43, 44
 neurons in, 45–46, 54
 role in lordosis response, 44, 47, 58
 spine density in, 53–54
- Visual system, primate, 146
- VMH, *see* Ventromedial nucleus of the
 hypothalamus
- W**
- White adipose tissues (WAT), 78, 81–82,
 83–85
 epididymal (EWAT), 78, 81
 gonadal, 77, 78
 sensory innervation, 83–85
