

Index

- ADD DEA model, 24
- Agglomerative approach, 145–147
- Agglomerative nesting (AGNES) technique, 146–149
- Asset approach, 29, 31–33, 35, 36

- BCC DEA model, 13, 16–18, 24, 123, 125
- Bisecting K-means, 148
- Bond mutual funds, persistence in, 167

- CCR DEA model, 13, 14–16, 18, 24, 123
- Chi-square test, 186, 188, 190, 192
- CLARA (Clustering Large Applications) technique, 145
- Clustering, 143–163, 169–184
 - facets search, 202
- Cobb–Douglas production function, 11
- Cochran’s test, 187, 190–191, 203
- Constant returns to scale (CRS), 13, 16, 20, 23, 29, 36, 53–83, 100–115, 125, 206–223
- Contingency tables, 168–169, 186, 187, 189–194, 203

- CRS-Slacks-based measures of efficiency, 86, 87
- CVaR (Conditional Value at Risk), 43

- Data Development Analysis, 12
- Data Envelopment Analysis (DEA), 5–6, 26–30, 33, 36, 42, 119, 123, 124
 - basic models, 11–23
 - ‘best practice’ frontier, 120–121
 - persistence of mutual fund performance, 168
- DEA-Malmquist index, 5
- Decision-making units (DMUs), 11, 12, 14–19, 21–23, 29, 32, 36, 119, 121, 123, 126, 162
- Dendrogram, 147, 151–155, 170–184
- Deposits, role in bank production process, 36
- DIANA (Divisive Analysis) technique, 147–157, 169–184, 188
- Distribution-free approach (DFA), 13, 26, 27
- Diversification, 4, 25
- Divisive approach, 147–148
- DPEI index, 29

- Economic efficiency, 7–8
- Effectiveness, 8, 9
- Efficiency, 9, 31
 - of MFMC, 100–115
 - data, 47–52
 - empirical analysis, 52–88
 - robustness of variables, 91–95
 - variable-returns-to-scale
 - on the efficiency rankings, influence of, 88–91
 - productive, 11
 - price, 11
 - overall, 11
 - scale, 16
 - technical, 10, 11, 16
 - economic, 7–8
- Empirical analysis, 52–88
- Equity mutual funds,
 - persistence in, 167
- European Fund and Asset Management Association (EFAMA), 3
- European Union, 27
- FANNY technique, 145, 148
- Fractional programming
 - problem, 14
- Free disposal hull (FDH), 13, 26, 27
 - persistence of mutual fund performance, 168
- Frontier-efficiency study,
 - applications to financial institutions, 23–33
 - asset approach, 31–33
 - context of, 23–25
 - production approach, 31
 - review of, 25–30
- Fuzzy analysis, 145
- Growth-oriented funds,
 - persistence in, 166
- Haberman's test, 188
- Hierarchical techniques, 144–148
- Hot hands phenomenon, 166
- Iberian Balance Sheets Analysis System (SABI), 42
- Income-oriented funds,
 - persistence in, 166
- Institutional portfolios
 - performance, 6
- Intermediation approach, 31–33
- Jensen ratio, 29
- Kernel K-means, 148
- Linear programming model, 15
- Marketing and service, 39, 40, 43–44, 52, 84, 97, 119–120, 132, 133, 135, 136, 138, 160, 162, 195, 199, 202–204
- Money market funds,
 - persistence in, 167
- Multi-management stages
 - model, in MFMC, 35–45
 - portfolio management
 - competence, 37
 - variables of, 39–45
- Multiplier model, 15
- MVaR (Modified Value at Risk), 43
- Network DEA model, 36
- Non-oriented frontier approach, 120

- Nonparaeff, 53, 132
- Non-radial model, 123
- Official Business Registries, 37
- OR ratio, 185, 186
- Overall efficiency, 11, 41, 44,
 - 52, 84, 86, 94–95,
 - 97, 120, 132,
 - 133–136, 138, 167,
 - 194, 198, 202–204
- PAM (Partitioning around Medoids) technique, 144–145, 148
- Pareto–Koopmans (PK) model, 13, 18, 126
- Partitioning, 144, 145
- Persistence of mutual fund performance, 165–199, 203
 - bond mutual funds, 167
 - efficiency, empirical results of, 188–199
 - equity mutual funds, 167
 - growth-oriented funds, 166
 - income-oriented funds, 166
 - methodology of, 167–188
 - money market funds, 167
- Polyhedral convex set, 124
- Portfolio management, 38–39,
 - 40, 42, 43–44, 52,
 - 84–87, 91–93, 97,
 - 119, 120, 132, 134,
 - 136, 138, 142, 160,
 - 167, 194–195, 202,
 - 203
 - competence, 37
- Price efficiency, 11
- Production approach, 29, 31, 35, 36
- Production frontier, 9, 10
- Production function, 9–11
- Productive efficiency, 11
- Productivity, 7–9, 31
 - ratio, 8
- Profit approach, 31–32
- Property-liability insurance industries, 27
- Random searches for facets, 136–143, 202
- Recursive portfolios, 168
- Residual analysis, 188
- Risk-bearing, 28
- Risk-management approach, 32
- Risk-pooling, 28
- Scale efficiencies, 16, 88
- Sharpe index, 29
- Slacks-based measure (SBM), 13, 18–23, 24, 30, 53–83, 100–115, 120–122, 201–203
 - of efficiency, variations of, 123–163
 - locally efficient companies applying Variation III, search for, 143–163
 - new measures, basic concepts of, 123–132
 - random searches for facets (Variation IV), 136–143
 - SBM original model and SBM Variation I, comparative evaluation between, 132–136
 - persistence of mutual fund performance, 167
- Spanish Official Business Registry (Registro Mercantil), 42
- Spanish Securities Exchange Commission (CNMV), 41, 42, 47
- Stakeholder approach, 36–37
- Stochastic frontier analysis (SFA), 13, 26–28

- Subprime mortgage financial crisis, 3
- Survivorship bias, 166, 186
- Technical efficiency, 10, 11, 16
- Technological relationship, 10
- Thick frontier approach (TFA), 13, 26, 27
- Total factor productivity (TFP), 11, 27
- Total productivity factor (TPF), 8
- Unoriented sub-stages model, 52
- Variable returns to scale (VRS), 13, 16, 17, 23, 29, 36, 121
- on efficiency rankings, influence of, 88–91
- Z-test, 185, 186, 189
