INVESTOR IN PEOPLE

To my beloved wife Lilia as the chief inspiration and security during this and previous book's writing.

# Contents

List of Figures	<i>xiii</i>
About the Author	<i>xvii</i>
Preface	<i>xix</i>
Acknowledgements	<i>xxi</i>
<b>Chapter 1 Introduction</b>	<b>1</b>
1.1. The Growing World Dynamics and Post-liberal Security Problems	1
1.2. New Organizational and Management Models and Technologies	2
1.2.1. DARPA Mosaics Concept	3
1.2.2. Spatial Grasp Paradigm	4
1.3. How the Book Is Organized	5
<b>Chapter 2 Word Security Areas, Bodies and Measures</b>	<b>9</b>
2.1. Introduction	9
2.2. Security Issues in Concrete Areas	9
2.2.1. Epidemics	9
2.2.2. World Religious Diversity	10
2.2.3. Environmental Dangers	10
2.2.4. Refugees Crises	11
2.2.5. Armed Conflicts	11
2.2.6. Other Areas, Terrorism	12
2.3. Some International Security Bodies and Measures	13
2.3.1. United Nations	13
2.3.2. Security Networks	13
2.3.3. New Security Technologies	14
2.4. Conclusion	14

<b>Chapter 3 Spatial Grasp Model and Technology</b>	<b>15</b>
3.1. Introduction	15
3.2. General SGT Idea	15
3.3. Main Features of SGL	16
3.3.1. SGL Recursive Structure	17
3.3.2. SGL Basic Elements	18
3.3.3. More on SGL Details	19
3.4. SGL Distributed Interpretation Basics	24
3.5. SGL Interpreter Organization	25
3.5.1. Components and Organization of SGL Interpreter	25
3.5.2. Data Structures of the Interpreter	25
3.5.3. Functional Processors of the Interpreter	29
3.5.4. Tracks-based Automatic Command and Control	31
3.6. Relation of SGT to Gestalt Psychology and Theory	34
3.7. Conclusion	35
<b>Chapter 4 Spatial Grasp Language (SGL)</b>	<b>37</b>
4.1. Introduction	37
4.2. Full SGL Syntax and Main Constructs	37
4.3. SGL Top-level	39
4.4. SGL Constants	41
4.4.1. Information	42
4.4.2. Physical Matter	43
4.4.3. Custom Constants	43
4.4.4. Special Constants	44
4.4.5. Compound Constants, or Grasps	45
4.5. SGL Variables	46
4.5.1. Global Variables	46
4.5.2. Heritable Variables	46
4.5.3. Frontal Variables	47
4.5.4. Nodal Variables	47
4.5.5. Environmental Variables	48
4.6. SGL Rules	51
4.6.1. Type	51
4.6.2. Usage	52
4.6.3. Movement	53
4.6.4. Creation	54
4.6.5. Echoing	55
4.6.6. Verification	59
4.6.7. Assignment	60
4.6.8. Advancement	60
4.6.9. Branching	62

4.6.10.	Transference	66
4.6.11.	Exchange	66
4.6.12.	Timing	67
4.6.13.	Qualification	68
4.6.14.	Grasping	69
4.7.	Elementary Programming Examples in SGL	70
4.8.	Conclusion	71
<b>Chapter 5 Security Related Management Examples under SGT</b>		<b>73</b>
5.1.	Introduction	73
5.2.	Finding Suspects Worldwide	73
5.3.	Controlling and Impacting the Spread of Conflict	74
5.4.	Distributed Simulation of Territorial Conquest	76
5.5.	Collective Evacuation from a Disaster Zone	77
5.6.	Conclusion	78
<b>Chapter 6 Networked Security Related Solutions</b>		<b>79</b>
6.1.	Introduction	79
6.2.	Network Management Basics	79
6.2.1.	Network Creation	79
6.2.2.	Finding and Collecting Any Path between Nodes	80
6.2.3.	Spanning Tree (ST) from a Node to All Other Nodes	81
6.2.4.	Shortest Path Tree (SPT) from a Node to All Other Nodes	82
6.2.5.	Creating RT from All Nodes to All Other Nodes	84
6.3.	Distributed Operations on Networked Structures	86
6.3.1.	Finding Strongest Sub-networks or Cliques	87
6.3.2.	Discovering Weakest or Articulation Points	88
6.3.3.	Changing Network Structures	88
6.4.	Finding Centres of Different Communities and Distances between Them	90
6.5.	Conclusion	92
<b>Chapter 7 Managing Security by Spatial Control of Moving Objects</b>		<b>93</b>
7.1.	Introduction	93
7.2.	Missile Defence Scenario Example	93
7.2.1.	Proceeding through Missile Defence Main Stages	93
7.2.2.	Expressing Missile Defence Management in SGL	94
7.3.	Tracing Complexly Moving Objects by Distributed Sensor Networks	95

7.4.	Space Objects Movement	97
7.4.1.	Using Virtual Object Copies	97
7.4.2.	Space Navigation with Collision Avoidance	98
7.5.	Managing Refugees Flow	99
7.6.	Conclusion	100
<b>Chapter 8</b>	<b>Investigating Nuclear War Dangers under SGT</b>	<b>103</b>
8.1.	Introduction	103
8.2.	International Conflicts and Their Probabilities	103
8.2.1.	Complexity of Relations between Countries	103
8.2.2.	World Nuclear Powers and Weapons Distribution	104
8.2.3.	Evaluating Probabilities of Nuclear War	105
8.3.	World Nuclear Danger Patterns in SGL	105
8.3.1.	A 3-node Danger Pattern	106
8.3.2.	More Complex 4-node Danger Pattern	108
8.3.3.	Danger Pattern with Multiple Nodes	109
8.4.	Conclusion	112
<b>Chapter 9</b>	<b>Distributed Mosaic-based Organizations</b>	<b>113</b>
9.1.	Introduction	113
9.2.	The DARPA Mosaic Concept	113
9.3.	SGT-based Distributed Mosaic Simulation	116
9.3.1.	Networked Representation of Mosaic Space	116
9.3.2.	Grouping Particular Type Neighboring Elements	116
9.3.3.	Collective Surrounding and Impacting of a Danger Element	117
9.4.	Combining Swarming with Hierarchical Command and Control	122
9.4.1.	Initial Distribution of Networked Units	122
9.4.2.	Swarm Movement Scenario	122
9.4.3.	Finding Topologically Central Unit	123
9.4.4.	Creating Runtime Infrastructure	123
9.4.5.	Targets Collection and Distribution and Impact	123
9.4.6.	Full Scenario Integration	124
9.5.	Swarm against Swarm Aerial Scenario	125
9.6.	Distributed Driverless Platoon Management	126
9.6.1.	Normal Management Starting from Platoon's Head	126
9.6.2.	Management of a Fragmented Platoon	127
9.6.3.	Returning to Normal Platoon Operation	128
9.7.	Conclusion	128

<b>Chapter 10 Conclusions</b>	<i>131</i>
10.1. Explored Features of Word Security Problems and Their SGT Solutions	<i>131</i>
10.2. Future Plans	<i>133</i>
References	<i>135</i>
Index	<i>153</i>

# List of Figures

## Chapter 2

Figure 2.1.	Ebola Outbreak in Africa with Air Traffic Connections to the Rest of the World. . . . .	10
Figure 2.2.	World Colour-coded Map Denoting Different Religious Affiliations.. . . .	11

## Chapter 3

Figure 3.1.	The Basic Idea of SGT: Controlled Navigation, Matching and Grasping of Physical, Virtual and Execution Spaces.. . .	16
Figure 3.2.	Multi-source Space Coverage and Matching.. . . . .	16
Figure 3.3.	Spreading Spatial Patterns and Creation of Distributed Infrastructures. . . . .	17
Figure 3.4.	SGL Recursive Syntax.. . . . .	18
Figure 3.5.	Spatial Interpretation of SGL Scenarios. . . . .	24
Figure 3.6.	Distributed Operational and Infrastructures Knowledge under SGT.. . . . .	25
Figure 3.7.	SGL Interpreter Main Components and Their Interactions.. . .	26
Figure 3.8.	Main Track Components. . . . .	32
Figure 3.9.	Forward World Grasping. . . . .	32
Figure 3.10.	Echoing and Tracks Optimization. . . . .	33
Figure 3.11.	Further World Grasping.. . . . .	34
Figure 3.12.	Gestalt Explaining Examples. . . . .	34

## Chapter 4

Figure 4.1.	Repeated Network Navigation with Self-spreading-parallelizing SGL Scenario. . . . .	70
-------------	---	----

## Chapter 5

Figure 5.1.	Spatial Worldwide Search for Individuals with the Return of Data Found. . . . .	74
Figure 5.2.	Spatial Coverage and Impact of the Evolving Distributed Processes. . . . .	75
Figure 5.3.	Spatial Simulation of the Territory Coverage by Conflicting Forces. . . . .	77

Figure 5.4. Collective Evacuation from a Disaster Zone: (a) Initial State; (b) Evacuation in Progress. . . . . 78

**Chapter 6**

Figure 6.1. Distributed Network Creation. . . . . 80  
Figure 6.2. Reaching a Node from Another Node. . . . . 81  
Figure 6.3. Creating Any ST from a Node to all Other Nodes. . . . . 82  
Figure 6.4. Creating SPT from a Node to all Other Nodes. . . . . 83  
Figure 6.5. Registering in the SPT Root Node the Shortest Paths to all Other Nodes. . . . . 84  
Figure 6.6. Routing Tables in Nodes for SPT of Figure 6.4. . . . . 85  
Figure 6.7. SPTs from All Nodes of the Network to all Other Nodes. . . 86  
Figure 6.8. Routing Tables Providing Shortest Paths from All Nodes to all Other Nodes of the Network. . . . . 86  
Figure 6.9. Finding Strongest Parts, or Cliques, in the Network. . . . . 87  
Figure 6.10. Weakest or Articulation Points of the Network. . . . . 88  
Figure 6.11. Removing All Links Between Nodes of Certain Cliques. . . . 89  
Figure 6.12. Removing All Articulation Nodes in the Network. . . . . 90  
Figure 6.13. Finding Centres of Different Communities. . . . . 90  
Figure 6.14. Communities May Become Too Close to Each Other. . . . . 92

**Chapter 7**

Figure 7.1. Picking Up a Hostile Missile. . . . . 94  
Figure 7.2. Distributed Objects Tracking by a Sensor Network. . . . . 96  
Figure 7.3. Simulating Moving Physical Objects in Space by Their Propagating Virtual Copies. . . . . 97  
Figure 7.4. Investigating Proper Area for Collision Avoidance for the Vehicle's Next Waypoints. . . . . 98  
Figure 7.5. Simulation and Management of Movement of Refugees to the Desired Destinations. . . . . 99

**Chapter 8**

Figure 8.1. Main Players and Powers and Types of Their Relationships in the Middle East. . . . . 104  
Figure 8.2. A Simple 3-node Danger Pattern. . . . . 106  
Figure 8.3. Representing the 3-node Pattern by a Path Through All Nodes. . . . . 106  
Figure 8.4. A 4-node Danger Pattern. . . . . 108

Figure 8.5. Representing the 4-node Pattern by a Path Through All Nodes. . . . . 109

Figure 8.6. Multiple Nodes Danger Pattern. . . . . 110

Figure 8.7. Sequential-parallel Representation of the Multiple Nodes Pattern. . . . . 110

Figure 8.8. A Possible Worldwide Match by the Discussed Patterns. . . . 111

**Chapter 9**

Figure 9.1. Grasping the Whole While Parts-tiles Missing. . . . . 114

Figure 9.2. Practical Experiments on Perception of Wholeness of Incomplete Figures. . . . . 115

Figure 9.3. Mosaic Space Simplified Model. . . . . 116

Figure 9.4. Links to Neighboring Tiles: (a) Direct\_Neighbors; (b) Corner\_Neighbors; (c) All\_Neighbors. . . . . 117

Figure 9.5. Grouping of Direct Neighbors Under Threshold Given. . . . 118

Figure 9.6. Discovering a Danger on a Distributed Mosaics. . . . . 118

Figure 9.7. Finding a Full Chain of Certain Elements Surrounding the Danger Tile. . . . . 119

Figure 9.8. Setting Cooperation Between All Neighboring Elements of the Full Chain Found. . . . . 120

Figure 9.9. The Final Elimination of the Danger Object. . . . . 121

Figure 9.10. Networked UCAVs. . . . . 122

Figure 9.11. Runtime Finding of Central Unit. . . . . 123

Figure 9.12. Creating Runtime Distributed Operational Infrastructure. . . 124

Figure 9.13. Swarm Against Swarm Fight Scenario Ideas. . . . . 125

Figure 9.14. Regular Collective Platoon Management. . . . . 127

Figure 9.15. Collective Management of a Fragmented Platoon. . . . . 127

## About the Author

**Peter Simon Sapaty**, Chief Research Scientist at the Ukrainian Academy of Sciences, has been researching networked systems for five decades. Outside of Ukraine, he has worked in former Czechoslovakia (now the Slovak Republic), Germany, the UK, Canada and Japan as a Group Leader, Alexander von Humboldt Researcher, and invited and Visiting Professor. He launched and chaired the SIG on Mobile Cooperative Technologies in Distributed Interactive Simulation project in the US, and he invented a distributed control technology that resulted in a European patent. Dr Sapaty has published several books and over 200 papers, and he has worked with several international scientific journals, including in the role of Editor-in-Chief.

# Preface

The current book reflects our decades of dealing with large distributed networked systems, with the gained practical and theoretical experience allowing for their effective seeing, comprehending and impacting as a whole, from above rather than inside, with capabilities for the latter too. And this experience appeared to be close to the gestalt psychology and theory highlighting the unique quality of human (and may not only) brain to directly grasp the wholeness of different phenomena while treating parts, which may not be complete, in the context of this whole, rather than vice versa.

We have strengthened this holistic vision by a special, constantly evolving, distributed programming model and technology, operating not so inside system components but rather above and between them. This resulted in a possibility of extrapolating holistic qualities of a concentrated brain to dynamic distributed systems while providing their integral goal-driven management and behaviour in real-time and often ahead of it. The current, fifth, book on this paradigm and resultant networking technology is examining the application of the accumulated experience to analysis and management of national and international security problems, especially those caused by the world's growing human and environmental dynamics and unpredictability in the twenty-first century.

These security problems may be massive, distributed and spatial in nature, potentially appearing any time in any world points, simultaneously covering large territories, also involving different cultures, religions, traditions and legislation. They can be caused by complex patterns of international relations, may need continuous monitoring of world dynamics with numerous moving objects, whether technical or human, in terrestrial and celestial spaces. The existing security bodies, with often outdated world information collected in a centralized way, also capable of becoming dysfunctional, may even happen to represent part of the security problems rather than their solutions. We will be addressing many such security problems while offering exemplary solutions based on the spatial grasp technology (SGT) described in the current and previous books.

The growing world dynamics and international instability and insecurity inspired the urgent search for radically new models guaranteeing not only prosperity and safety but even survivability in rapidly changing environments, with the use of all available, scattered, casual, even not perfect resources, which should work together as one system. And, this is just in line with the ideology and methodology of SGT being developed for the last decades and in different countries. Another related example is the latest DARPA Mosaic Warfare concept, discussed as a special chapter in this book, which may have an important influence on global security too.

*Peter Simon Sapaty*

# Acknowledgements

To the following persons and organizations who supported this book:

John Page, University of New South Wales, Australia, for numerous and frank discussions related to unmanned systems, massive collective robotics, including such controversial issues as legality and ethics of using unmanned systems in combat, which may be inevitably raised up in relation to complex international security operations; also, most productive was cooperation with Jon within the board of *International Journal of Intelligent Unmanned Systems* published by Emerald.

Bob Nugent (CDR, USN, Retired), Virginia Tech and Catholic University of America's Busch School of Business, USA, with whom the author notes numerous discussions on advanced command and control in operational settings marked by uncertainty and dynamically changing goals and conditions, such as autonomous systems and international security networks. These discussions have stimulated the joint detailed analysis and connection with the latest DARPA Mosaic Warfare concept mentioned in the book.

*Journal of International Relations and Diplomacy*, David Publishing Company, and personally Melian Lee, for the support of author's publications mentioned in this book and fruitful cooperation within the editorial team, where the journal's orientation on most recent world developments in international relations, security studies, politics, military study, foreign affairs and many others was extremely important and stimulating for this book preparation and writing.

Vasily Begun, dealing with security methods at the Institute of Mathematical machines and Systems of the National Academy of Sciences of Ukraine, with whom the author had numerous discussions on how to anticipate and measure emerging security threats on both national and international levels, and how practically organize effective security procedures under limited financial and human resources and especially within existing state institutions.

Alexander Reznick, engaged in system management at the Institute of Mathematical Machines and Systems of the National Academy of Sciences of Ukraine, with whom the author cooperated for decades and whose projects using neural networks for control of complex dynamic systems influenced security methods considered in the book, with the described SGT capable of simulating the use of neural networks in a global scale.

Svitlana Tymchyk, Natalia Karevina, and Marina Hoshuk, the editors and producers of the *Mathematical Machines and Systems* journal of the National Academy of Sciences of Ukraine, for the friendship and lasting support of the author's regular publications in the journal, including those mentioned in this book, where quick and professional editing and translation (as the journal is trilingual: Ukrainian, Russian and English) of the submitted material was really impressive.
