

Index

- Absorption trait, 113–114
- Advanced analytics, 29, 31
- Advanced persistent threat, 68
- Agency of technology, 8, 12–15
- Agile development, 9
- Analytical methods, 43
- Analytics-based prediction, 4–5
- Anxiety, 90–91
- Artificial intelligence (AI), 2, 26, 69
- Augmentation, 148, 153–154, 167–168
- Augmented reality (AR), 148
- Automated storefronts, 5
- Automation, 5
- AutoML, 4

- Backfire, 17
- Behavioural techno-strain, 206, 216
- Big data, 29, 43
- Big Five Personality Trait
 - Assessment, 187–188
- Black-box algorithms, 17
- Blockchain technologies, 70
- Business analytics capability, 30
- Business intelligence competency centre (BICC), 40, 42

- Chatbots, 5, 14
- Clean desk policy, 75
- Coding, 93–94
- Cognitive absorption (CA), 112
- Cognitive engagement, 113–114
- Compliance behaviour, 71
- Computer-mediated communication (CMC), 180
- Concentration problems, 216
- Concept drift, 15
- Concept matrix, 228–242
- Confidentiality, 65

- Consumer value perceptions, 155–156, 167
- Continuous partial attention, 89
- Conversational agents, 14
- Counteraction strategies, 75–77
- Covariance shift, 15
- Curiosity, 115
- Cyberbullying, 63, 209

- Data (*see also* Big data)
 - analytics, 33, 36
 - breach response policy, 75
 - consumption, 36, 44
 - curators, 43
 - data-driven organisational ethos, 36
 - imbalance, 16
 - ingestion, 36, 43
 - integrity, 15
 - management, 36
 - models, 36, 43
 - platform, 36
 - processes, 36
 - requirement, 36, 43
 - science labour, 5
 - strategy, 43
- Data-driven decision-making, 27, 29–32, 37, 44, 46
- Decision support systems (DSSs), 4
- Decision-makers, 29
- Deep learning, 3–5, 17
- Denial of service attacks, 68
- Design science research, 32
- Deteriorated performance, 216
- Digital marketing tools, 149
- Digital shopping approaches, 157
- Digital technologies, 26
- Digitisation, 65–70

- DIKIW pyramid, 37, 42
- Disclosure, 209
- Discontinuous usage intention, 216
- Dissatisfaction, 213–214
- Distraction, 216–217
- Diurnal cortisol production, 215

- E-commerce, 62
- Ease of use, 153, 166
- Educational gamified systems, 62
- Electronic leash and expectations of availability, 89–90
- Email
 - filtering, 76
 - policy, 75
- Embedded case study, 93
- Employee ISP violations, 71
- Employees security-related behaviours, 70
- Exhaustion, 214
- Experiential marketing, 149
- External human threats, 68
- Extroversion, 187–188

- Face-to-face self-disclosure, 187
- False progress, 18
- Fatigue, 91
- Fear of Missing out (FoMo), 210
- Feature overload, 212
- Feeling inefficient, 91
- Feeling of obligation, 91–92
- Firms, 62, 75
- Flow
 - state, 113–114
 - theory, 120
- Focussed immersion, 115
- Fully autonomous systems, 13–15

- Gamified systems, 62
- Gartner information technology, 29
- Graphical processing units (GPUs), 3

- Healthcare, 62
- Hedonic value perception, 167–168
- Hedonism, 155
- Heightened enjoyment, 115
- Human and machine knowledge
 - collaboration, 37
- Human in loop' ML systems, 12
- Human intervention, 43
- Human involvement, 7
- Human threats, 68
- Human-AI
 - collaborations, 31
 - hybrid systems, 12–13
- Hybrid intelligence systems, 12
- Hyperpersonal communication
 - model, 176
- Hypothalamic-pituitary-adrenal axis (HPA axis), 215

- Impression management, 211
- Information and communication
 - technologies (ICTs), 62, 86, 205
- Information avoidance behaviour, 217
- Information fatigue syndrome (IFS), 91
- Information loss, 15–16
- Information overload, 210
- Information processing capability, 29
- Information richness theory, 176
- Information security (InfoSec), 63
- Information system (IS), 62, 178
- Information technologies (IT), 62–65
- Informativeness, 153, 166
- Informed decisions, 30
- InfoSec policies (ISPs), 70
 - violation, 73
- Insecurity, 212–213
- Insider threat programs, 75
- Insights-driven digital organisation (iDDO), 40
- Integrative framework of CA for technology use, 122–125
- Integrity, 65
- Intelligent machines, 26–27, 29
- Intentional malicious insiders, 69

- Intentional non-malicious insiders, 69
- Interaction approach, 88
- Interaction overload, 210
- Interactivity, 167–168
 - of AR, 154
- Internal human threats, 68
- Internet of Things (IoT), 4–5, 17, 69
- Interpretivism, 93
- Interrelationships, 124
- Interruptions, 89
- Invasion, 213

- Knowledge work, 26–29
 - social context, 28
- Knowledge workers, 28

- Logic, 36
- Logical reasoning, 43

- Machine learning (ML), 3–4, 17, 26
- Malicious attackers, 70
- Malware, 68
- Maturity frameworks, 37
- Maturity scale, 43–44
- Model poisoning attacks, 16
- Multiple cloud code resources, 70
- Multitasking, 76

- Natural language processing (NLP), 3–5
- Negative spillover, 17–18

- Obligation, 91–92, 95
- Online disinhibition, 180, 184–187
- Online learning and education, 62
- Online social comparison, 210–211
- Organisational ability, 37
- Organisational transformation
 - framework for data-driven decision-making (OTxDD), 25, 27, 32, 37–47

- Parental monitoring, 211
- Password attacks, 68

- Perceptions of information privacy violations, 62–63
- Person-artefact-task model (PAT model), 122–124
- Person-environment fit theory, 63
- Person-technology theory, 64
- Personal device policy, 75
- Personalisation, 7
- Personality trait-extroversion, 187–188
- Phishing attacks, 68
- Physiological techno-strains, 206, 215–217
- Policy violation, 69
- Privacy
 - concerns, 213
 - risk, 179
- Programmer bias, 16
- Project managers, 9
- Psychological stress, 180, 187
- Psychological techno-strain, 206, 213–215
- Psychophysiological effects, 215–216
- Purchase intention, 155, 167

- Ransomware attacks, 69
- Regret, 214–215
- Reinforcement learning, 4–5
- Reliable data, 5
- Reliance on cloud, 17
- Remote access policy, 75
- Response approach, 88
- Robotics, 4–5, 17
- Role ambiguity, 89

- Self-disclosure, 176–177
- Sensemaking approach, 43
- Sensor failures, 17
- Signal innovation, 8
- Sleep problems, 217
- Social anxiety, 179–180, 184
- Social context cues hypothesis, 176
- Social identity model of deindividuation (SIDE model), 176

- Social influence, 218
- Social media, 62, 204
- Social networking, 176
- Social networking sites (SNSs), 62–63, 176, 204
- Social overload, 211–212
- Social presence theory, 176
- Standardisation, 6
- Stimuli approach, 88
- Stimulus-organism-response model (SOR model), 154–155
- Strain, 90
- Strategy, 37
- Stress, 63–65
- Stressors, 64
- Strong AI, 10–11
- Structural model testing, 165
- Supervised learning, 5
- Switching exhaustion, 215
- System developers, 9–10
- Systematic literature review (SLR), 32–33

- Task assemblage, 31
- Task augmentation, 31
- Task orientation, 8–11
- Task substitution, 31
- Technical SNS-stressors, 212–213
- Techno-complexity, 64, 73, 76, 90
- Techno-insecurity, 64, 74, 90
- Techno-invasion, 64, 74, 90
- Techno-overload, 64, 74, 76, 90
- Techno-uncertainty, 64, 73–74, 76, 90
- Techno-unreliability, 64, 74, 76
- Technoaddiction, 91
- Technological threats, 68
- Technology acceptance model (TAM), 111
- Technostrains, 88, 90–91, 205
- Technostress, 63, 87, 205–206

- Technostressor, 88, 205
- Telecommunication organisation, 40
- Telepresence, 148, 153, 157–158, 166–168
- Tellegen Absorption Scale, 113
- Temporal dissociation, 114
- Top management and users, 9
- Training data, 15
- Trait of absorption, 113–114
- Transactional approach, 88
- Transactional model of SNS-use stress, 208
- Turing test, 10

- Uncertainty, 213
- Unintentional non-malicious insiders, 69
- Unsupervised learning, 5
- Upper respiratory infection (URI), 216
- User-generated content, 204
- Utilitarian value perception, 155–156, 166
- Utilitarianism, 155

- Validity, 15
- Video games, 62
- Virtual platforms, 62
- Virtual reality (VR), 151 (*see also* Augmented reality (AR))
- Vulnerabilities, 3, 15–16, 18, 70, 76

- Weak AI, 9–11
- Well-being, 183, 187
- Work-home
 - balance, 101–102
 - conflict, 89
- Workaholism, 91
- Workplace, 63
