PREFACE

This volume of *Advances in Library Administration and Organization* takes as its underpinning theme the whole subject of innovation in Library and Information Services. It considers the various types of innovation through case studies and exemplars both from within the Library and Information Services (LIS) sector and other cognate industries and environments. It looks at both the last and the next 30 years by charting major technology developments and the ways in which they have not only been adopted and adapted by library services but also how the resulting improvements and enhancements have impacted upon key user communities. But more importantly, the volume projects these developments forward and in addition forecasts and analyses likely future inventions and innovations and how LIS leaders and managers should not only respond but also actually help to create and shape our future world.

All web links were correct at the time of checking (June 2016).

ACKNOWLEDGMENTS

The editors are especially grateful to all who made this volume possible; to the authors of the various chapters for their contributions and their willingness to be involved in the project; to Eileen Breen and Emma Stevenson for their advice and assistance throughout the development of the proposal and the production of the volume, to Sharon Holley for her help during the various stages and also to the University of St Mark & St John for their support.
